Switchboards, Distribution Systems and Cabinet Systems

Introduction

Overview

SIVACON power distribution systems and motor control centers

Up to 7400 A

Reliable, economical, flexible and communication-capable

For all applications in infrastructure and process industry

in circuit-breaker design

in fixed-mounted design

in in-line design

in plug-in design

in withdrawable design

Degree of protection up to IP54

Type-tested

Tested for resistance to internal arcing faults

Tested for resistance to earthquakes

Switchboards, Distribution Systems and Cabinet Systems

Introduction

SICUBE system cabinets and cabinet air conditioning

System cabinets for individual solutions including cabinet air conditioning for optimum operating conditions

For a wide range of applications in tough environments and in laboratories, offices and medical practices

Flexible expansion levels and types of delivery

Coordinated logistical and delivery concepts

Degree of protection up to IP55

For heavy integrated equipment up to 1000 kg

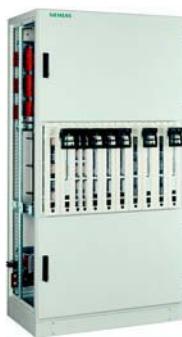

System cabinets in EMC design

System cabinets in earthquake-proof design

In all RAL colors, including special colors

Switchboards, Distribution Systems and Cabinet Systems

Introduction

SIKUS 3200 side-by-side switchgear cabinets	ALPHA 630-DIN floor-mounted distribution boards
For expansion as main and subdistribution boards up to 3200 A	Up to 630 A
For all applications in infrastructure	For applications in non-residential and industrial buildings
For individual and series-connected	Flexible delivery forms (flat pack or preassembled)
Flexible expansion with many different assembly kits and accessories	Modular system
In circuit-breaker design	Many different assembly kits for individual expansion
In fixed-mounted design	Safety class 1 and safety class 2
In in-line design	Depth 210 mm, 250 mm and 320 mm
Degree of protection up to IP55	Degree of protection up to IP55

Overvoltage category	V	1000/III	III
Rated impulse withstand voltage U_{imp}	8	6	
Clearances in air and creepage distances	DIN VDE 0110	DIN VDE 0110	
Rated insulation voltage U_i	1000	690	
Rated operating voltage U_e	690	690	
Rated voltage U_n (AC 40 Hz to 60 Hz)	-	690 for installed equipment	
Rated current	A	3200, main busbars	up to 630
Short-circuit strength			
Main busbars	I_{pk}	kA up to 220	up to 61.3 (3-pole) ¹ , conduction interval 30 ms
	I_{cw} (1 s)	kA up to 100	20, conduction interval 1 s
Distribution buses	I_{pk}	kA up to 220	
	I_{cw} (0.5 s)	kA up to 100	
Protective measures		Safety class 1 (protective conductor terminal)	Safety class 1 (protective conductor terminal) Safety class 2 (total insulation)
Number of conductors in busbar run	3, AC 4, AC 2 and 3, DC		4/5
Degree of protection to EN 60529		IP55, with cover for shock protection and sealed door IP20, with cover for shock protection, without door	IP43 with door, IP55 with door (with matching flanges)
Mounting rail row spacing per mounting rail	mm -		150
Modular width (MW)			18 mm, 12 MW + 1 MW can be mounted
Pollution degree	3		3
Ambient temperature	°C 35 (24 h mean value)		35 (24 h mean value)
Relative atmospheric humidity	% 50 at 40 °C		50 at 40 °C
Test specification	acc. to EN 60439-1 (VDE 0660 Part 500), IEC 60439-1		acc. to EN 60439-1/3 (VDE 0660 Part 500/504), DIN VDE 0603-1
Altitude	m max. 2000 (above mean sea level)		-
Enclosure	Frame and doors of 2 mm sheet steel		Sheet steel
Surface of metal parts	Electrolytically zinc-coated and powder-coated		Electrolytically zinc-coated and powder-coated
Color	RAL 7035 light gray (other RAL colors on request)		RAL 7035 (light gray)
Locking devices	2/4-point interlocking with integrated espagnolette lock and double-bit key 3 mm pin		3-point interlocking with integrated espagnolette lock (on request can be replaced by other locking systems)
Packing	-		Impact-resistant, environmentally friendly

¹) Busbar holder spacing 400 mm, Cu busbars 30 mm x 10 mm.

SIVACON Power Distribution Systems and Motor Control Centers

General data

Overview

Low-voltage switchboards form the link between equipment (generators), transmission (cables, overhead lines) and transformation (transformers) of electrical energy on the one hand, and the loads, such as motors, solenoid valves, actuators and devices for heating, illumination and air conditioning on the other.

As the majority of applications are supplied with low voltage, the low-voltage switchboard is of special significance in both public supply systems and industrial plants.

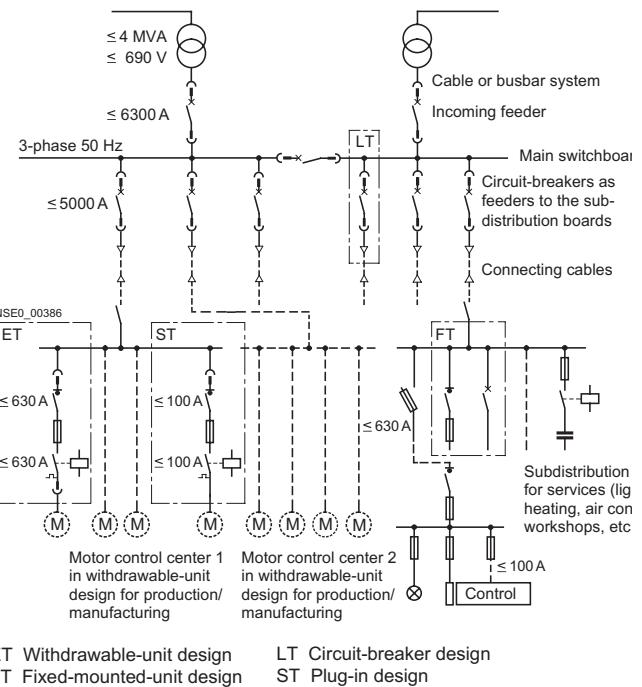

Reliable power supplies depend on good availability, flexibility to allow for changes and process-related modifications, and high operating safety.

Power distribution in a low-voltage system usually takes place via a main switchboard (power center or main distribution board) and a number of sub-distribution boards or motor distribution boards, also known as motor control centers (MCC).

See example opposite.

The SIVACON low-voltage switchboards offer optimum solutions in low-voltage systems for all applications up to 7400 A. The SIVACON 8PV switchboards are manufactured by Siemens in Leipzig, and the SIVACON 8PT switchboards by our SIVACON Technology Partners near you.

The most important selection criteria are shown in the table below.

Selection criteria	SIVACON 8PV		SIVACON 8PT	
Busbar position	top	rear	top	rear

1) Circuit-breakers optionally in withdrawable design.

SIVACON Power Distribution Systems and Motor Control Centers

For processes

Overview

The SIVACON 8PV low-voltage switchboard is a type-tested switchgear and controlgear assembly that is used for example in the power industry, in the chemical and oil industries and in the capital goods sector.

It is notable for its excellent service availability and high degree of personnel and system safety. It can be used for all applications up to 6300 A:

- As main switchboard (power control center or main distribution board)
- As motor control center (MCC)
- As sub-distribution board.

With the many combinations that the SIVACON modular design allows, a wide range of demands can be met both in fixed-mounted, plug-in and in withdrawable-unit design.

All modules used are type-tested (TTA), i.e. they comply with the following standards:

- IEC 60439-1
- EN 60439-1, VDE 0660 Part 500

and in addition

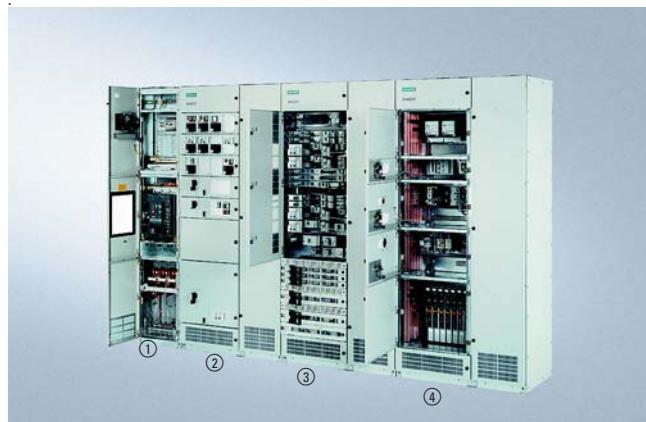

- DIN VDE 0106 Part 100 (protection against electric shock)
- IEC 61641, VDE 0660 Part 500, supplement sheet 2 (arcing faults)
- IEC 60068 Part 2, IEC 60980 (induced shocks)
- Certification to EN 9001 and EN 14001 (quality/environmental management system).

Benefits

- Safety and quality verification for every switchboard through type tests
- Meets every requirement profile with the high quality of series production
- Easy re-ordering and short delivery times
- Type-tested standard modules (TTA)
- Space-saving base areas from 400 mm x 400 mm
- Solid wall design for safe section-to-section separation
- High packing density with up to 40 feeders per cabinet

- Standard operator interface for all withdrawable units
- Test and disconnected position with door closed
- Visible isolating gaps and points of contact
- Alternative busbar positions, at the top or at the rear, in the section
- 3- and 4-pole busbar system up to 6300 A
- Cable/bar connection from above or below

SIVACON 8PV switchboards are always manufactured by Siemens.

- ① Circuit-breaker design with:
 - SENTRON WL and VL circuit-breakersfor:
 - incoming feeders
 - outgoing feeders to sub-distribution boards and loads
 - bus couplings.
- ② Withdrawable-unit design with:
 - outgoing feeders and contactor assemblies (fuseless, fused)for:
 - motors
 - actuators
 - solenoid valves
 - cable feeders.
- ③ Plug-in design with:
 - outgoing feeders and contactor assemblies (fuseless, fused)for:
 - motors
 - cable feeders (can also be combined with 3NJ6 plug-in load isolating units).
- ④ Fixed-mounted design with:
 - SENTRON VL circuit-breakers
 - fuse switch disconnectors
 - 3NJ4 in-line fuse switch disconnectorsfor:
 - cable feeders to loads.

Design

Withdrawable-unit design (MCC design)

- For frequently changing requirements, predominantly in the process industry, the design of choice is the withdrawable-unit design. What is required here is flexibility and the highest level of availability.

Withdrawable unit size 1/4 (11 kW with direct contactor and SIMOCODE DP),
withdrawable unit size 1/2 (18.5 kW with direct contactor and SIMOCODE DP)

Without shutting down the switchboard it is possible, for example, to adapt withdrawable units to changed motor outputs or incorporate withdrawable units for new loads. It is even possible to modify the withdrawable unit compartments. With the ease of handling and short conversion times the withdrawable-unit design ensures high levels of system availability.

Withdrawable unit size 1 (30 kW with contactor-type star-delta circuit)
You can find further information on the Internet at:
www.sivacon.de.

SIVACON Power Distribution Systems and Motor Control Centers

For processes

Withdrawable-unit section

- Test and disconnected position behind closed door without affecting the degree of protection
- Highest packing density with minimum base area (up to 40 withdrawable units per section)
- Integrated operator error protection for all withdrawable units
- Clear indication of unit positions
- Easy insertion of the withdrawable units without overcoming insertion forces
- Visible isolating distances on the infeed and outgoing sides.

SIVACON Power Distribution Systems and Motor Control Centers

For infrastructure

Overview

The SIVACON 8PT low-voltage switchboard is a type-tested switchgear and controlgear assembly that is used for infrastructural supply in industry and in buildings (administrative and functional buildings as well as industrial and commercial buildings), but also in the process industry.

SIVACON 8PT is tailored to the needs of the global market, i.e. it considers the demand for standard solutions from a single source but at the same time for local production. It can be used for all applications up to 7400 A:

- As main switchboard (power control center or main distribution board)
- As motor control center (MCC)
- As sub-distribution board.

With the many combinations that the SIVACON modular design allows, a wide range of demands can be met both in fixed-mounted, plug-in and in withdrawable-unit design.

All modules used are type-tested (TTA), i.e. they comply with the following standards:

- IEC 60439-1
- EN 60439-1, VDE 0660 Part 500

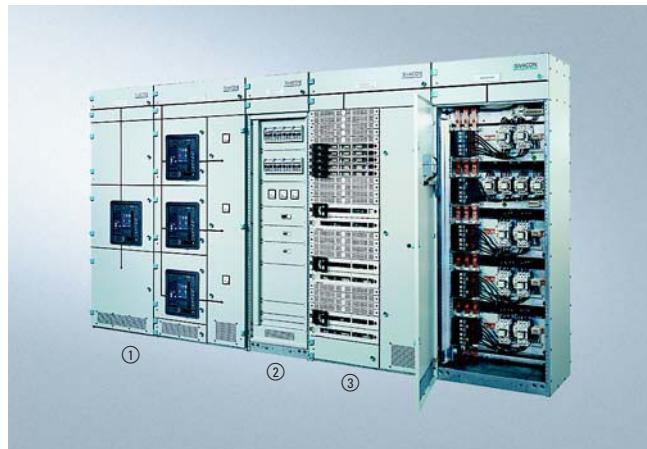

and in addition

- IEC 61641, VDE 0660 Part 500, supplement sheet 2 (arcng faults)
- Certification to EN 9001 and EN 14001 (quality/environmental management system).

SIVACON 8PT with busbar at rear up to 3200 A

SIVACON 8PT with busbar at top up to 7400 A

- ① Circuit-breaker design with:
 - SENTRON WL and VL circuit-breakers for:
 - incoming feeders
 - outgoing feeders to sub-distribution boards
 - busbar couplings
- ② Fixed-mounted with:
 - 3VL, 3RV circuit-breakers
 - 3NP fuse switch disconnectors
 - 3NJ4 in-line fuse switch disconnectors for:
 - cable feeders to loads
- ③ 3NJ6 circuit-breaker design with:
 - 3NJ6 plug-in load isolating units for:
 - cable feeders to loads
- ④ Plug-in design with:
 - outgoing feeders and contactor assemblies (fuseless, fused) for:
 - motor feeders
 - cable feeders.
- ⑤ Withdrawable-unit design with:
 - outgoing feeders and contactor assemblies (fuseless, fused) for:
 - motor feeders
 - actuators
 - solenoid valves
 - cable feeders.

SIVACON Power Distribution Systems and Motor Control Centers

For infrastructure

Benefits

- Safety and quality verification for every switchboard through type test
- Siemens switchgear and controlgear for reliable operation
- Worldwide presence due to local manufacture
- High flexibility for economical solutions
- Type-tested standard modules (TTA)
- Busbar system optionally at the top or at the rear in the cubicle
- 3- and 4-pole busbar system up to 7400 A
- Short-circuit strength I_{pk} up to 375 kA
- Large equipment mounting depth for universal installation
- Modular design of the device compartments
- Wide variety of combination options
- Cable/bar connection from above or below

- For plug-in design and withdrawable-unit design
- Easy and reliable handling
- Speedy modification without interrupting operation
- High availability.

Your advantage: "SIVACON Technology Partner"

The SIVACON 8PT switchboard is manufactured around the world by our SIVACON Technology Partners, with all the advantages that only a local supplier can offer.

The partners selected by Siemens are highly competent, constantly audited switchboard manufacturers located close to you.

Design

Circuit-breaker design

Switchboards for high energy demands usually have a large number of sub-distribution boards and loads connected downstream. This means that there are special requirements with regard to long-term operating reliability and operator safety. The "infeed", "coupling" and "feeder" functions must be reliably available over long periods. Maintenance and testing must entail only short downtimes. The circuit-breaker design meets these requirements with the SENTRON WL and VL circuit-breakers.

SENTRON WL 1600 A circuit-breaker, withdrawable design
Section width 400 mm

You can find further information on the Internet at:
www.sivacon.de.

Circuit-breaker section

- Up to 3 circuit-breakers per section can be installed
- Test and disconnected position with closed door
- Free choice of direction of incoming supply without restriction to technical specifications
- Optimum connection conditions for every rated current range.

SICUBE System Cabinets and Cabinet Air Conditioning

Welded design

Overview

The system cabinets are sized in accordance with a 100 mm grid. The following minimum and maximum sizes must be taken into account:

- Heights of 400 mm to 2400 mm
- Widths of 300 mm to 1800 mm
- Depths of 300 mm to 2400 mm.

Benefits

Customized solutions

You only have to order what you actually need. And we will supply it too – whether it's an empty cabinet, a complete cabinet or entire rows of cabinets complete with internal components

Tailor-made

Our cabinets are supplied as you want them: as separate parts or completely assembled – with base, swivel frame and side panels.

To every degree of protection

All our cabinets can be supplied to the degree of protection you required:

- IP00
- IP20
- IP40 or
- IP55.

The color sets the tone

Our system cabinets can be delivered in any commonly used RAL color or in more than one color. Special colors are available on request.

Delivery time on request.

Every one a one-off

Customized cutouts, e.g. for instruments and command units, vents, grills or windows with or without plexiglas, are supplied as part of our delivery program.

Safe thanks to grounding concept

By using tapping screws for attaching the cladding parts of the 8MC cabinets, all these parts are integrated into the protective conductor circuit, i.e. no additional grounding measures are necessary.

Furthermore, all components within the SICUBE 8MC cabinet that are fixed in this manner are also integrated into the protective conductor circuit.

Design

Standard version

- Degree of protection IP40/IP55
- Coating RAL 7032/RAL 7035/SN 611¹⁾
- Front door (hinged right) or double-wing doors for the width = 1200 mm
- Espagnolette lock with two-way key, 3 mm pin
- 180° hinges
(angle of opening when cabinets mounted side-by-side approx. 135°)
- Rear panel
- Top plate (galvanized)

The order number is composed as follows:

8 M C 2	-	8	0	2
Height	1800 mm	8		
	2000 mm	0		
	2200 mm	2		
Width	600 mm	6		
	800 mm	8		
	900 mm	9		
	1200 mm	2		
Depth	400 mm		4	
	600 mm		6	
	800 mm		8	
Degree of protection	IP40			4
	IP55			5
Installation	Installation as a single unit with two side panels			E
	Side-by-side installation without side panels			R

1) SN 611: Ergo gray in accordance with the Siemens standard. The colors RAL 7032/RAL 7035 and SN 611 are identical in price.

SICUBE System Cabinets and Cabinet Air Conditioning

Welded/bolted design

Overview

The system cabinets are sized in accordance with a 100 mm grid. The following minimum and maximum sizes must be taken into account:

- Heights of 400 mm to 2400 mm
- Widths of 300 mm to 1800 mm
- Depths of 300 mm to 2400 mm.

Benefits

Customized solutions

You only have to order what you actually need. And we will supply it too – whether it's an empty cabinet, a complete cabinet or entire rows of cabinets complete with internal components

Tailor-made

Our cabinets are supplied as you want them: As separate parts or completely assembled – with base, swivel frame and side panels.

To every degree of protection

All our cabinets can be supplied to the degree of protection you required:

- IP00
- IP20
- IP40 or
- IP54.

The color sets the tone

Our system cabinets can be delivered in any commonly used RAL color or in more than one color. Special colors are available on request.

Delivery time on request.

Every one a one-off

Customized cutouts, e.g. for instruments and command units, vents, grills or windows with or without plexiglas, are supplied as part of our delivery program.

Safe thanks to grounding concept

By using tapping screws for attaching the cladding parts of the 8MF cabinets, all these parts are integrated into the protective conductor circuit, i.e. no additional grounding measures are necessary.

Furthermore, all components within the SICUBE 8MF cabinet that are fixed in this manner are also integrated into the protective conductor circuit.

Design

Standard version

- Degree of protection IP40/IP54
- Coating RAL 7032/RAL 7035/SN 611¹
- Front door (hinged right) or double-wing doors for the width = 1200 mm
- Espagnolette lock with two-way key, 3 mm pin
- 180° hinges
(angle of opening when cabinets mounted side-by-side approx. 135°)
- Rear panel
- Top plate (galvanized)

The order number is composed as follows:

	8 M F 2	-	E	R
Height	1800 mm 2000 mm 2200 mm	8 0 2		
Width	600 mm 800 mm 900 mm 1200 mm		6 8 9 2	
Depth	400 mm 600 mm		4 6	
Degree of protection	IP40 IP54		4 5	
Installation	Installation as a single unit with two side panels Side-by side installation without side panels			

1) SN 611: Ergo gray in accordance with the Siemens standard. The colors RAL 7032/RAL 7035 and SN 611 are identical in price.

SICUBE System Cabinets and Cabinet Air Conditioning

Cabinet air conditioning

Overview

In control cabinets, depending on the ambient conditions (e.g. heat, cold, air humidity etc.), there may be a tendency to overheat or for mold to form. In such cases the cabinets should be air-conditioned. The following air-conditioning equipment is available for this purpose:

- Filter fans
- Air conditioners/cooling equipment
- Heat exchangers
- Heaters/thermostats

When selecting the individual air-conditioning units, attention should be paid to the ambient temperature, power losses of the installed equipment, maximum permissible device temperatures and heat dissipation of the cabinet used. In addition, the required degree of protection must also be taken into account.

Benefits

Installing air-conditioning equipment in SICUBE system cabinets ensures high fault tolerance for switchgear and controlgear

installations and consequently a high level of availability of machines and plants.

Filter fans

Benefits

After heat dissipation via the surface of a control cabinet and/or ventilation apertures in the enclosure parts of the cabinets, filter fans are the most cost-effective method of removing heat from

the cabinets. However, the effect is to achieve only a cabinet temperature that is above the ambient temperature.

SICUBE System Cabinets and Cabinet Air Conditioning

Air conditioners/cooling equipment

Overview

At ambient temperatures that are higher than the permissible device temperatures it is necessary to use air conditioners. All of these units operate with CFC-free coolants. Air conditioners dehumidify the air inside the cabinet.

Benefits

Cooling units for door or side-panel mounting or top mounting

Two separate air circuits ensure that no ambient air enters the cabinet. Powerful radial-flow fans provide for good air circulation in the cabinet. Simple control of temperature with integrated thermostat (top-mounting units).

Side-mounting units

Intelligent standard electronics with greatest customer benefit:

- Test mode
- Temperature limits
- Startup delay
- Door contact function
- Fault alarm contact
- Local diagnosis
- UL approval.

SICUBE System Cabinets and Cabinet Air Conditioning

Heat exchangers

Overview

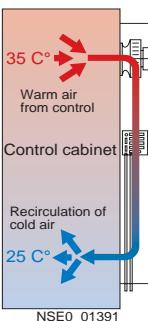

Air-to-air principle (8ME78)

Heat exchangers operating according to the air-to-air principle work with two entirely separate air circuits: an external and an internal circuit. A fan sucks in cool air from the outside. A second fan forces the heated air inside the cabinet past a large-surface-area finned separating element, which passes on the heat to the external circuit.

Air-to-water principle (8MR5)

Heat exchangers operating according to the air-to-water principle work with one air circuit. The warm air inside the cabinet is forced across the heat exchanger by a fan. As a result, the heat is dissipated to the cooling medium, water, and the air inside the cabinet is cooled.

SICUBE System Cabinets and Cabinet Air Conditioning

Heaters

Benefits

Control cabinet heaters are used to prevent malfunctions due to condensation or corrosion and to maintain the temperature of control cabinets (maintaining a minimum temperature). The design of the aluminum section ensures even temperature distribution and hence an optimum heating effect across the entire surface.

All devices are also available in UL-approved and in special-voltage versions.

Selection and ordering data

Heating fans

Benefits

At higher heat outputs of 150 W and above, heaters with fans (heating fans) are used. The integrated fans provide for better air circulation and therefore bring about an even air temperature in the cabinet.

All devices are also available in UL-approved and in special-voltage versions.

Selection and ordering data

Heating fans	Power	Voltage	Series	DT	Order No.	PS*	Weight per PU approx.

SICUBE System Cabinets and Cabinet Air Conditioning

19" withdrawable fan unit

Benefits

The compact, powerful withdrawable fan unit is used for circulating the air in control and server cabinets and for targeted heat removal in 19" modules.

The natural convection on the cabinet surface is improved, preventing the formation of hot spots.

Selection and ordering data

	Power W	Voltage V	Series	DT	Order No.	PS*	Weight per PU approx. kg

SIKUS 3200 Side-by-Side Switchgear Cabinets

General data

Benefits

- Modular design principle for a variety of cabinet combinations, whether for individual or side-by-side installation
- High standard of quality and safety
- Flexible expansion with many different assembly kits and accessories
- Easy to install thanks to modular kit system
- Reliable contacting due to grounding concept with thread-forming tapping screws
- The appropriate version to suit every requirement
- Easy planning and configuring
- Attractive design

Area of application

The individual and side-by-side cabinets of the SIKUS 3200 system conform to the relevant standards.

They can be used as main distribution boards and sub-distribution boards in:

- administrative and non-residential buildings
- industrial and commercial buildings
- public buildings such as schools and hospitals

Other possible uses include those as a control cabinet for heating, ventilation, electronics and communication.

Technical specifications

Environmental aspects

The plastics used are recyclable. The paints used are free from solvents, cadmium and lead.

Form of internal separation (compartmentalization)

Partitions increase the level of operator safety and protect against solid foreign bodies passing between adjacent units.

Overvoltage category	V	1000/III

Locking devices		2/4-point interlocking with integrated espagnolette lock and double-bit key 3 mm pin	

SIKUS 3200 Side-by-Side Switchgear Cabinets

General data

Technical specifications

Constructional and test requirements

The partially equipped SIKUS 3200 modular cabinets are tested as "type-tested low-voltage switchgear assemblies" (TTA) according to EN 60439-1 (VDE 0660 Part 500) IEC 60439-1.

The manufacturer of a switchboard is usually the manufacturer of the switchgear and controlgear. During installation, the switchgear manufacturer must pay attention to the special instructions for the partially equipped SIKUS 3200 modular cabinets and for the Siemens switching devices that are to be fitted. We offer a two-day distribution board training course for this purpose.

If there are deviations in the components fitted or in the dimensions, the characteristics of the type-tested SIKUS 3200 modular cabinets change accordingly.

The tested characteristics of the switchgear and controlgear assembly TTA must not change to an impermissible extent, for example with regard to:

- Short-circuit strength
- Temperature rise
- Arcing spaces of the switching devices

Provided account is taken of the standard IEC 60204-1 (EN 60204-1), equipment safety, it is also possible to use the units for control systems for machinery and process plants.

Type testing

The SIKUS 3200 type-tested modular cabinets satisfy the requirements in the following categories:

- temperature-rise limit
- insulation strength
- short-circuit strength
- effectiveness of the protective conductor
- air and creepage clearances
- mechanical functions
- degree of protection

As the manufacturer, the switchgear and controlgear maker must set up the installation in conformance with EN 60439-1 (VDE 0660 Part 500), IEC 60439-1 and the instructions of the system supplier.

The routine test for

- wiring
- electrical functions
- insulation
- protective measures

must subsequently be performed by the manufacturer (switchgear and controlgear maker), and the test report must be signed.

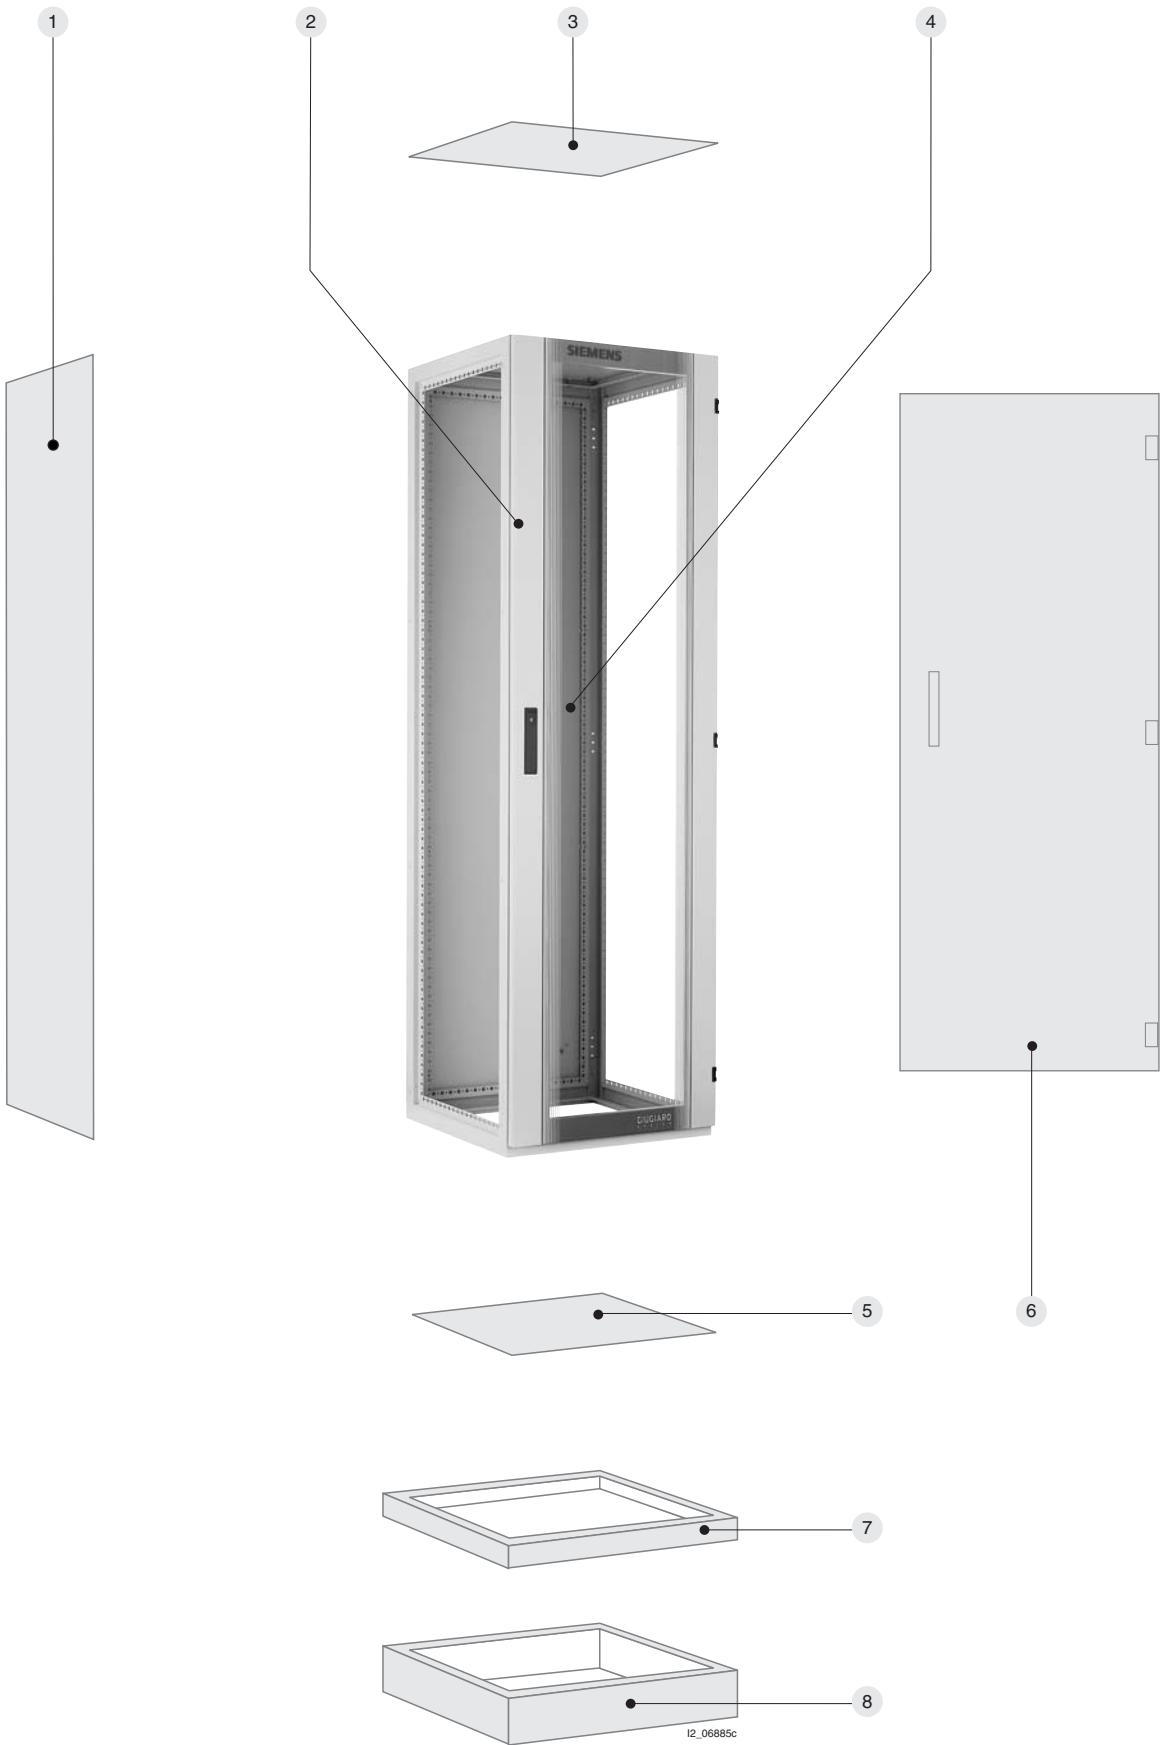

The internal arching fault test is performed in accordance with EN 60439-1, supplement sheet 2 (VDE 0660, Part 500, supplement sheet 2) or IEC 61641 (report).

SIKUS 3200 Side-by-Side Switchgear Cabinets

General data

Design

SIKUS 3200 Side-by-Side Switchgear Cabinets

General data

All cabinet designs are modular, constructed according to the same principle.

The enclosure consists of a sturdy, perforated stay frame with top, floor and rear panel along with side panels, and depending on the width a single or double door. It is made of electrolytically zinc-coated and powder-coated sheet steel, and satisfies safety class 1 (protective conductor terminal).

The enclosure can be combined as required with appropriate assembly kits, enclosure components and doors.

With doors, the enclosures have degree of protection IP55 as standard. When individual cabinets are installed side by side, however, a seal between the stay frames is needed in order to achieve degree of protection IP55. The door can be hinged either on the left or right. The door opening angle is 180°, helping to provide unimpeded escape routes if operating rooms leave little space.

To match the enclosures there are appropriate type-tested busbar systems for rated currents up to 3200 A. The busbars can be arranged horizontally or vertically in the cabinets.

A fully developed and coordinated range of assembly kits for fixed-mounted and withdrawable-unit design is available.

The cabinets can be equipped with Siemens switchgear and controlgear and modular installation devices, mounted on standard mounting rails and support plates.

System design according to the modular design principle

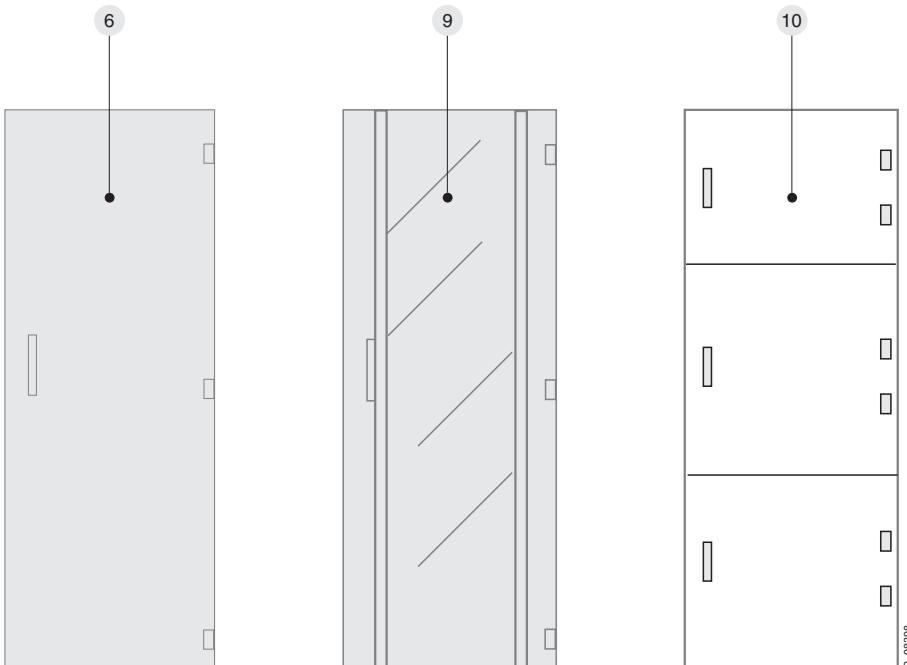

Stable cabinet frames with 25 mm hole spacing in accordance with DIN 43660, including:

- System-specific frame covering
- Cable entry from above or below
- Busbars arranged horizontally or vertically
- Base frame accessible from four sides
- Cabinet-height doors with espagnolette lock, 4-point interlocking and double-bit key with 3 mm pin
- Door opening angle 180°, door hinged either left or right
- Doors with expanded foam door seal
- Fixing with thread-forming tapping screws

All parts mounted with this fixing technique are therefore included in the protective measure.

Cabinet variants

- Unequipped section
- Section with mounting plate for mounting any equipment
- Section with assembly kit for circuit-breakers
- Section with standard mounting rails for modular installation devices
- Section with assembly kit for switch disconnectors
- Section with assembly kit for LV HRC fuse switch disconnectors
- Section with assembly kit for LV HRC in-line fuse switch disconnectors
- Section with assembly kit for switch disconnectors with LV HRC fuses in in-line design
- Section with assembly kit for p.f. correction modules
- Section with assembly kit for 19" system expansion
- Section with adapter kit for installing assembly kits from the SIKUS distribution board systems with plastic section covers

SIKUS 3200 Side-by-Side Switchgear Cabinets

Side-by-side switchgear cabinets

Benefits

- For mounting to side-by-side cabinets
- Conforms to DIN VDE 0660 Part 500, EN 60439-1
- Maximum achievable degree of protection IP55
- Safety class 1 (protective conductor terminal)
- Enclosure fully assembled with rear panel and closed top panel
- Frame of 2 mm sheet steel, enclosure parts 1.5 mm sheet steel, electrolytically zinc-coated, powder-coated
- Color: RAL 7035 light gray, other RAL colors on request

Selection and ordering data

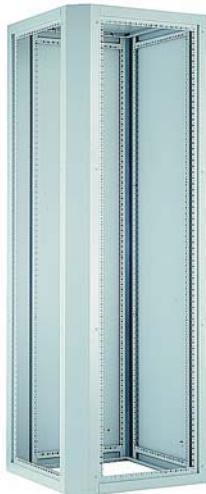

Dimensions	with rear panel, closed top panel and front door	Base plates closed	Base frame for corner cabinets H=100 mm	H = 200 mm
------------	--	--------------------	--	------------

Design

Corner cabinet assembled, consisting of:

- Control cabinet frame
- Top panel
- Rear panel

SIKUS 3200 Side-by-Side Switchgear Cabinets

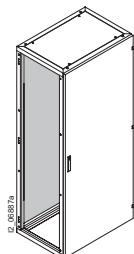

Side-by-side switchgear cabinets

Benefits

- For individual and side-by-side installation
- Conforms to DIN VDE 0660, Part 500, EN 60439-1
- Achievable degree of protection IP55
- Safety class 1 (protective conductor terminal)
- Enclosure fully assembled, consisting of:
 - Control cabinet frame
 - Rear wall sheet-steel door closed, top panel
 - Color: RAL 7035 light gray, other RAL colors on request
- Fixing grid 25 mm vertical and horizontal, to DIN 43660
- Mounting with thread-forming tapping screws
- 400 mm wide sections for lateral cable or busbar compartments

SIKUS 3200 Side-by-Side Switchgear Cabinets

Side-by-side switchgear cabinets

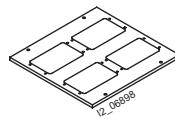

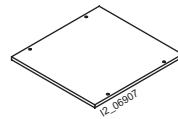

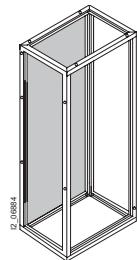

Benefits

- As modular cabinet for side-by-side installation
- Conforms to DIN VDE 0660, Part 500, EN 60439-1
- Degree of protection achievable up to IP55
- Safety class 1 (protective conductor terminal)
- Control cabinet frame of sheet-steel section 2 mm, electrolytically zinc-coated, powder-coated
- Color: RAL 7035 light gray, other RAL colors on request
- Fixing grid 25 mm vertical and horizontal, to DIN 43660
- Mounting with thread-forming tapping screws
- 400 mm wide sections for lateral cable or busbar compartments

SIKUS 3200 Side-by-Side Switchgear Cabinets

Assembly kits for power distribution

Benefits

- Rated current $I_n = 630 \text{ A}$ up to 3200 A
- Can be installed in fixed-mounted or withdrawable design
- Equipment compartments can be additionally partitioned, form 1 to 3a optional
- Cable connection at top or bottom
- Installation kit with complete mounting accessories

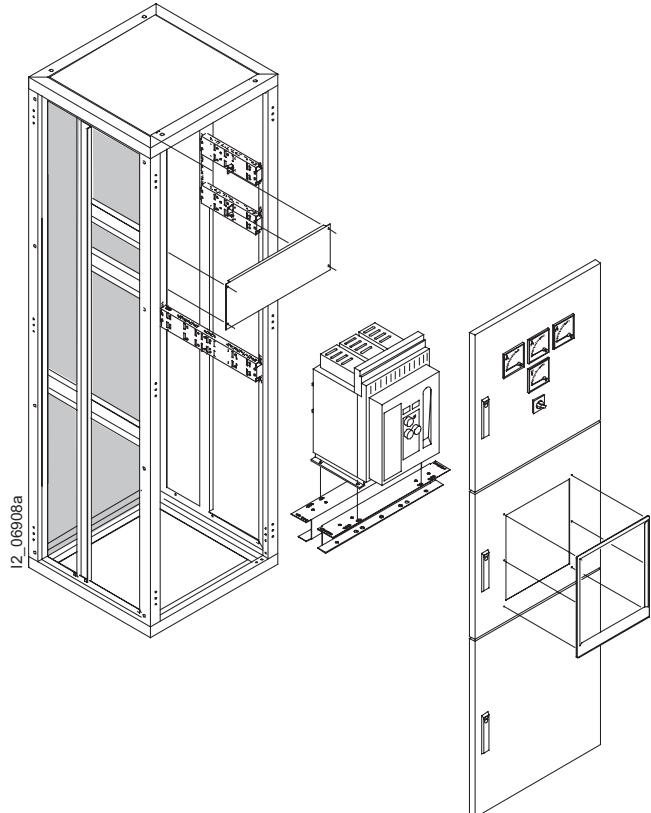

Selection and ordering data

Design

Installation example:

Operating mechanism through the door

Assembly kits for 3WN6 circuit-breakers

3-pole; $I_n = 630 \text{ A}$ to 3200 A

Operating mechanism behind the door

including section cover and fixing accessories,
fixed-mounted/withdrawable

Operating mechanism through the door

without section cover and fixing accessories,
fixed-mounted/withdrawable

3-pole

4-pole

Assembly kits for SENTRON WL circuit-breakers

3-pole; $I_n = 630 \text{ A}$ to 3200 A

Operating mechanism behind the door

Size 1/2, fixed-mounted/withdrawable

Operating mechanism through the door

Size 1/2, fixed-mounted/withdrawable

For cross-arms see Page 7/56.

See also under general accessories.

Mounting frames are required whenever assembly kits are installed with section covers and unequipped section covers.

SIKUS 3200 Side-by-Side Switchgear Cabinets

Assembly kits for power distribution

Benefits

- Rated current $I_n = 160 \text{ A}$ to 1600 A
- 3-/4-pole
- Can be installed as fixed-mounted or withdrawable version in grid module 100 mm
- Equipment compartments can be additionally partitioned, form 1 to 3a optional
- Assembly kits for individual and project-related assembly, consisting of: switching device panels, unequipped section cover with supports, screws and fixing accessories
- Dimensions of the assembly kits (mm) according to DIN 43870
Height: 600
Width 250, 500
Cabinet size grid dimensions
 $H \times W: 150 \times 250$
- Unequipped section cover can be sealed as standard and can be quickly and securely attached to the supports by quick-release lock system.

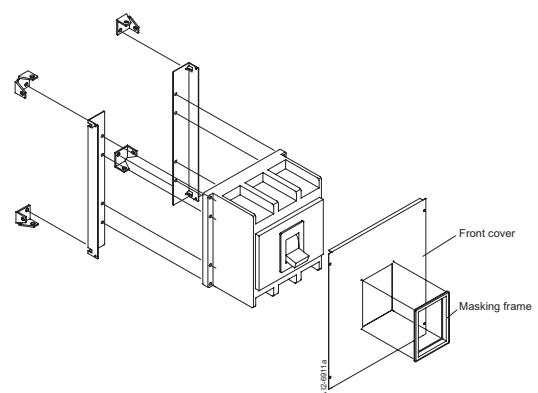

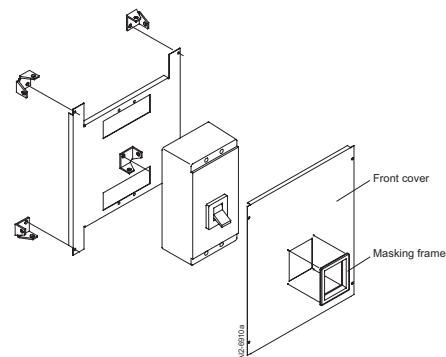

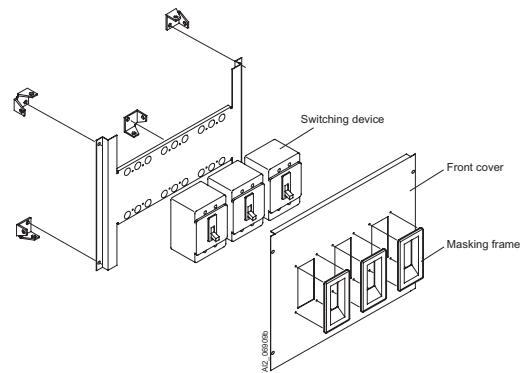

Note:

For installing the assembly kits in the empty cabinets, one adapter set per cabinet and 2 longitudinal stays per assembly kit width are required; these must be ordered in addition.

Design

- Kit consisting of support plate, section cover and fixing accessories
- Cross-arms and mounting frames for the assembly kits must be ordered separately

For cross-arms see Page 7/56.

Mounting frames are required whenever assembly kits are installed with front covers and unequipped section covers.

Assembly kits for SENTRON VL molded-case circuit-breakers up to 630 A rated current, see Page 7/80.

SIKUS 3200 Side-by-Side Switchgear Cabinets

Assembly kits for power distribution

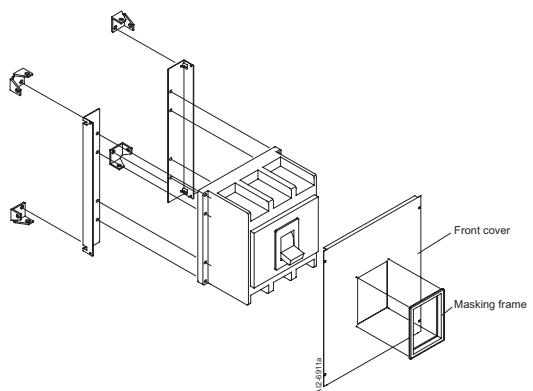

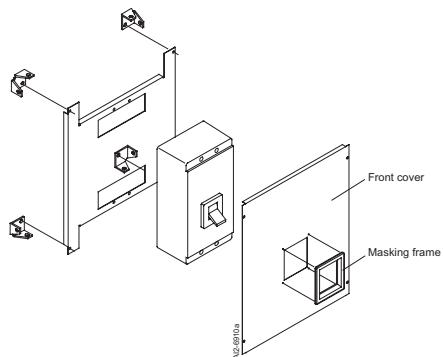

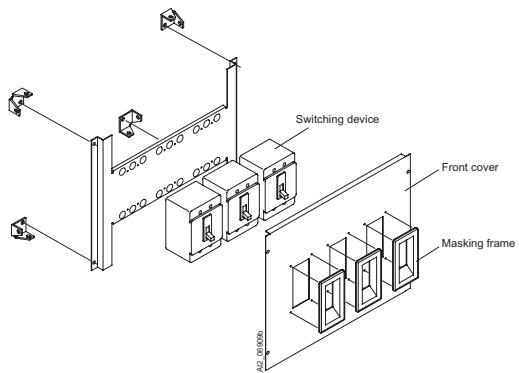

Benefits

- Rated current $I_n = 160 \text{ A}$ to 1600 A
- 3-/4-pole
- Can be installed as fixed-mounted or withdrawable version in grid module 100 mm
- Equipment compartments can be additionally partitioned, form 1 to 3a optional

Design

- Kit consisting of support plate, section cover and fixing accessories
- Cross-arms and mounting frames for the assembly kits must be ordered separately

SIKUS 3200 Side-by-Side Switchgear Cabinets

Assembly kits for power distribution

Benefits

- Rated current $I_n = 160 \text{ A}$ to 630 A
- For cabinet widths
1000 mm/ 1100 mm,
cabinet height
2000 mm/ 2200 mm

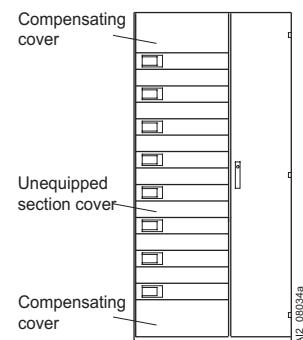

Design

As complete assembly kit

- Cabinet-height, including partition
- Busbar covers for cable compartment, compartmentalization
- Fixing accessories and door for cable compartment or with door for cable compartment and equipment compartment door

Installation example

- 3NJ6 assembly kit shown with cabinet and base

1) Installation is recommended.

SIKUS 3200 Side-by-Side Switchgear Cabinets

Assembly kits for power distribution

Benefits

- Rated current $I_n = 160 \text{ A}$ to 630 A
- For cabinet widths 600 mm, 800 mm, 1000 mm
- Fixed mounting
- Vertical mounting

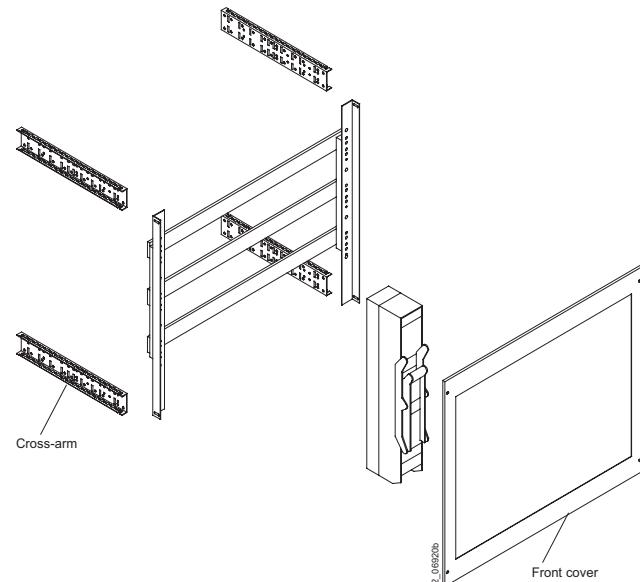

Design

As complete assembly kit

- Including fixing accessories
- Cross-arms for the assembly kits must be ordered separately

Installation example

Assembly kits in accordance with DIN 43870

- Assembly kits for individual and project-related assembly, consisting of: switching device panels, unequipped section cover with supports, screws and fixing accessories
- Dimensions of the assembly kits (mm) according to DIN 43870
Height: 750 mm
Width: 250, 500, 750
Cabinet size grid dimensions
H x W: 150 x 250
- Unequipped section cover can be sealed as standard and can be quickly and securely attached to the supports by quick-release lock system.

Note:

For installing the assembly kits in the empty cabinets, one adapter set per cabinet and 2 longitudinal stays per assembly kit width are required; these must be ordered in addition.

SIKUS 3200 Side-by-Side Switchgear Cabinets

Assembly kits for power distribution

Benefits

- Assembly kit for 3KA, 3KL switch disconnectors, rated current $I_n = 63 \text{ A}$ to 400 A
- Assembly kit for 3KE switch disconnectors, rated current $I_n = 250 \text{ A}$ to 1000 A
- From cabinet width of 600 mm , height 200 mm to 400 mm
- Can be installed as fixed-mounted version
- Assembly kit independent of depth
- Device compartments can be additionally partitioned

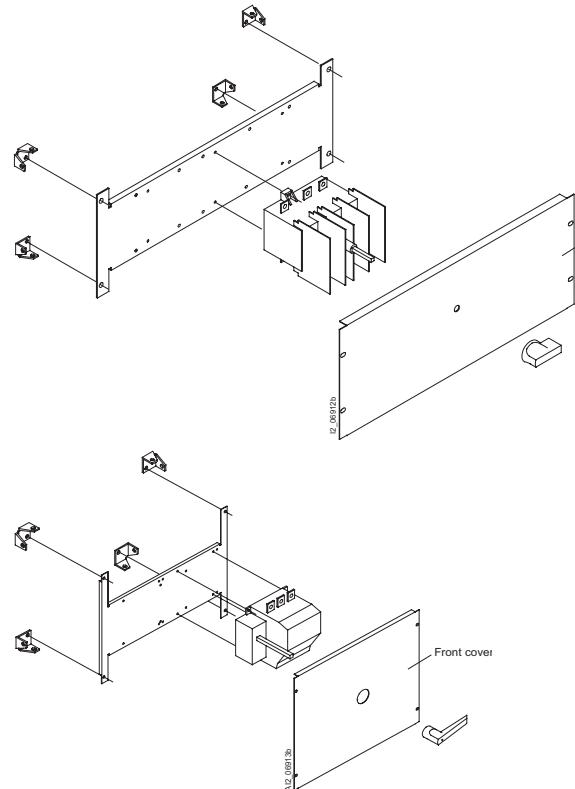

Design

As complete assembly kit

- Including sundries and positioning frame
- Cross-arms for the assembly kits must be ordered separately

Installation example

For cross-arms see Page 7/56.

Mounting frames are required whenever assembly kits are installed with front covers and unequipped section covers.

* This quantity or a multiple thereof can be ordered.

SIKUS 3200 Side-by-Side Switchgear Cabinets

Assembly kits for power distribution

Benefits

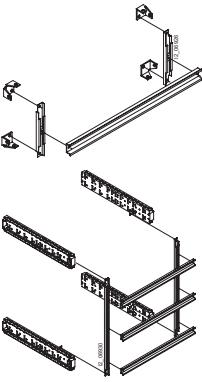

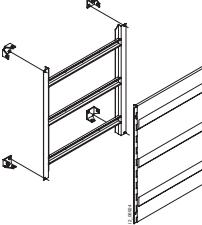

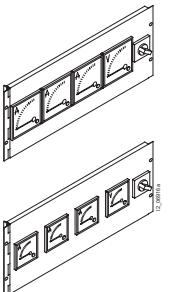

- Distribution section kit of 1.5 mm sheet steel, sendzimir-galvanized
- Color: RAL 7035, light gray

Clearance between rows 200 mm,
24 MW with cabinet width 600 mm,
36 MW with cabinet width 800 mm

Content:

- Complete kit, for installation behind the door, including sundries

ALPHA 630-DIN Floor-Mounted Distribution Boards

General data

Overview

System

The new Siemens switchboard system, based on decades of experience with distribution boards, is of modular design.

Particular attention was paid to individual installation practices.

The system includes unequipped boards as flat packs (delivered in individual parts for customer assembly, see also Part 3) in degree of protection IP43, unequipped boards ready assembled in degree of protection IP55, assembly kits for project-related and individual compilation, and a comprehensive range of accessories.

Enclosure

Material: sheet steel, electrolytically zinc-coated, powder-coated.

Sheet thickness:

degree of protection IP43/IP55

body 1 mm, door 1 mm

Color:

RAL 7035 (light gray)

Other RAL colors on request.

Assembly kits

The assembly kits consist of sendzimir-galvanized sheet steel and molded-plastic covers for a wide range of configuration possibilities, for example for switchgear and installation equipment.

The largest switching devices that can be installed in the ALPHA 630-DIN floor-mounted distribution boards are the Siemens switching devices up to a maximum rated current of 630 A.

Cabinet dimensions

All dimensions in mm

Height:

Internal dimension: 1800

External dimension with base: 1950

Width (internal/external dimensions):

250/300, 500/550, 750/800, 1000/1050, 1250/1300

Depth (external dimension): 210, 250, 320

Assembly kits in section size grid dimension

Height x width: 150 x 250

Benefits

- Available as a flat pack (kit for customer assembly; the assembly kits can be mounted directly on the platform) or preassembled as an unequipped board
- Easy planning thanks to modular design
- Generous wiring compartments behind the standard mounting rail
- Extensive range of assembly kits for Siemens switchgear and installation equipment for individual and project-related composition
- Assembly made easier by modules with keyhole mounting and quick-release locks
- System design in conformance with DIN, EN and VDE specifications
- Sturdy sheet-steel housing
- Degree of protection IP43 and IP55
- Safety class 1 (protective conductor terminal) and safety class 2 (total insulation)
- High-quality surface finish: cabinets made of electrolytically zinc-coated and powder-coated sheet steel, system components made of sendzimir-galvanized sheet steel, small components and screws galvanized and chromated (colorless)
- Doors can be hinged right or left
- Door opening angle 170°
- Replaceable locking systems (accessories)
- Transparent doors in Giugiaro design (accessories)
- Front cover with sealable 90° quick-release locks
- Environmentally friendly and recyclable plastics

Area of application

The ALPHA 630-DIN floor-mounted distribution boards are used wherever an ALPHA 400-DIN wall-mounting distribution board no longer provides sufficient component and wiring space, for example in administrative, non-residential, commercial and industrial buildings.

It rounds off the Siemens distribution board range with three different depths: 210 mm, 250 mm and 320 mm.

The distribution boards and components are designed as part of a modular system.

With just a few standard elements, they provide the widest possible variety and project-related mounting and configuration possibilities.

The ALPHA 630-DIN floor-mounted distribution boards comprise wall cabinets with up to 12 installation equipment units, each with 12 MW per unit of width (250 mm). The standard mounting rail row spacing is 150 mm as standard. A total of 5 board widths of 250 mm each (internal dimension) are available.

The cabinets are designed to meet safety class 1 (protective conductor terminal) and safety class 2 (total insulation). For floor-mounted distribution boards the standard degrees of protection are IP43 with a depth of 210 mm (flat pack: delivery in separate parts) and IP55 (unequipped board, preassembled) with depths of 250 mm and 320 mm. The rated current is 630 A.

40 mm or 60 mm busbar systems with dimensions up to 30 mm x 10 mm can be installed.

The modular system allows easy planning, configuring, cost calculation, ordering and assembly.

The assembly kits available for all the switchgear and installation equipment that can be fitted are designed such that only one size of screwdriver is needed for mounting.

ALPHA 630-DIN Floor-Mounted Distribution Boards

General data

Technical specifications

Overvoltage category	III
Rated impulse withstand voltage U_{imp}	kV
Air and creepage clearances	DIN VDE 0110
Rated insulation voltage U	V
Rated operating voltage U_e	AC/DC V
Rated voltage U_n (AC 40 Hz to 60 Hz)	V
Rated current	A
Rated peak withstand current I_{pk}	kA
Rated short-time current I_{cw}	kA
Protective measures	Safety class 1 (protective conductor terminal) Safety class 2 (total insulation)
Number of conductors in busbar run	4/5
Degree of protection to EN 60529	IP43 with door, IP55 with door (with matching flanges)
Mounting rail row spacing per mounting rail row	mm
Modular width (MW)	150
Pollution degree	18 mm, 12 MW + 1 MW can be mounted
Ambient temperature	°C
Relative atmospheric humidity	%
Test specifications	to EN 60439-1/3 (VDE 0660 Part 500/504), DIN VDE 0603-1
Enclosure	Sheet steel
Mounting dimensions	DIN 43870
Surface	Electrolytically zinc-coated and powder-coated
Color¹⁾	RAL 7035 (light gray)
Locking devices	3-point interlocking with integrated espagnolette lock (on request can be replaced by other locking systems)
Packing	Impact-resistant, environmentally friendly

Dimensions for cabinets

Cabinet (external dimensions)		
Height mm	Width mm	Depth mm
1950 with base (100 mm)	300 550 800 1050 1300	210
1950 with base (100 mm)	300 550 800 1050 1300	250
1950 with base (100 mm)	300 550 800 1050 1300	320

1) Other RAL colors on request.

2) Busbar holder spacing 400 mm, Cu busbar 30 mm × 10 mm.

ALPHA 630-DIN Floor-Mounted Distribution Boards

Unequipped cabinets

Benefits

- Types of delivery:
 - flat pack (board assembly kit for customer assembly: the cabinet-height rapid assembly kits (RMK) and the assembly kits can be mounted directly on the platform (rear panel) of the kit)
 - unequipped cabinet, preassembled
- Cabinet depth 210 mm
- Safety class 1 (protective conductor terminal) and safety class 2 (total insulation)
- Degree of protection IP43
- Color RAL 7035 (light gray)
- Enclosure (with base) unassembled with door¹⁾ supplied separately or enclosure (with base) preassembled with door¹⁾ and espagnolette lock, which can be replaced with other locking systems
- Flanges on the outgoing side, one 2-component flange per section width

ALPHA 630-DIN Floor-Mounted Distribution Boards

Unequipped cabinets

Benefits

- Marshalling boxes for supporting the incoming and outgoing cables, optional expansion for terminal blocks possible
- Large foamed cover on front with fixing screws
- Dimensions: height 350 mm, depths 210 mm, 250 mm and 320 mm
- Safety class 1 (protective conductor terminal)
- Protection class IP43 and IP55
- Color RAL 7035 (light gray)
- Flanges must be ordered separately

ALPHA 630-DIN Floor-Mounted Distribution Boards

Assembly kits for unequipped cabinets

Benefits

- Assembly kits for individual and project-related composition, consisting of: switching device panels, unequipped section cover with supports, screws and fixing accessories
- Dimensions of the assembly kits (mm)
Height: 150, 300, 450, 600
Width: 250, 500, 750
Section size grid dimensions H x W: 150 x 250

- Unequipped section cover can be sealed as standard and can be quickly and securely attached to the supports by quick-release lock system.

Note:

For installing the assembly kits in the unequipped cabinets, 2 longitudinal stays per assembly kit are required; these must be ordered in addition.

SENTRIC HP Molded-Plastic Distribution System

General data

Overview

The SENTRIC HP molded-plastic distribution system is a modular system for low-voltage small distribution boards, control panels and power distribution boards.

SENTRIC HP distribution board with support rack and cable space cover

Benefits

High-quality materials of the enclosures fulfill all the common demands made of such systems in an ideal way. These include:

- Protective insulation
- Corrosion resistance
- Mechanical strength
- Easy to work with
- Temperature resistance
- Free of maintenance
- Flame retardant, self-extinguishing

- Halogen-free (thus preventing consequential damages resulting from fire).
- Low weight of components.

Protective insulation

All enclosure parts and operating mechanisms are constructed so that they fulfill the conditions of the protective measure "total insulation" according to DIN VDE 0100, Part 410, when they are closed during operation. Enclosure fixings are situated outside the device installation space.

Area of application

It can be installed in all industrial plants, power stations, in large public or private buildings and in public utilities as well as in office buildings and residential buildings.

The components of the SENTRIC HP distribution system fulfill the requirements specified for type-tested low-voltage switchgear assemblies (TTA) according to EN 60439-1/DIN VDE 0660 Part 500. The enclosure corresponds to the protective measure "total insulation" according to DIN VDE 0100.

Specifications

DIN VDE 0660 Part 500

Specifications for type-tested low-voltage switchgear assemblies (TTA).

DIN VDE 0110

Specifications for the rating of creepage distances and clearances of electrical equipment.

IEC 60439-1

Factory-built switchgear assemblies for low voltage.

DIN VDE 0660 Part 107

Specifications for low-voltage switching devices.

DIN VDE 0100

Specifications for the erection of power installations with rated voltages up to 1000 V.

Statement of conformity

Herewith is stated that the components and distribution boards conform to the safety requirements for low-voltage equipment as laid down in the EEC Directive of February 19, 1973.

Special tests

Fire tests for equipment used in mining are performed by the "Versuchsgruben Tremonia", Dortmund, Germany.

Shock tests for equipment used in protective rooms are performed by the "Bundesamt für Zivilschutz", Bonn, Germany, regulation category RK 1.0/10 to safety level "A", Certificate of use 036 /95.

Earthquake tests are performed by the "IAB", Ottobrunn, Germany. Test for the use in EX-Zone 2 (special versions).

The enclosure is **UL certified**.

SENTRIC HP Molded-Plastic Distribution System

General data

Installation conditions

Installation	Climatic conditions according to DIN 50010	Special operating and ambient conditions
Indoor installation No additional measures required.	An indoor environment is an environment in rooms that are designed such that objects are largely separated from the direct influence of an open-air climate.	If the operating and ambient conditions differ from the standard conditions to DIN VDE 0660 Part 500, Item 6.1, appropriate measures must be taken to protect and maintain the operating capability of the switchgear and controlgear assembly for "Special operating and ambient conditions" according to Item 6.2 (mechanical protection, ventilation, indoor heating, breathers etc.).
External installation Measures: e.g. protected installation or protective roof, if appropriate with additional walls and door (protective cabinet).	An external environment is an environment in rooms that are designed such that objects are protected against direct sunlight and precipitation and possibly against wind, but otherwise are exposed to an open-air climate.	
Outdoor installation Only permissible with measures as for external installation.	An open-air climate is an environment that affects objects in the open air.	

Conversion from Pg to metric screwed glands

A new possibility of using metric screwed glands was tested for the SENTRIC HP molded-plastic distribution system. The result of this test showed that the Pg openings listed in the following table are also suitable for the use of metric screwed glands. Metric screwed glands with lock nut are used. Corresponding sealing washers are used in order to ensure degree of protection IP65.

The values for the tested conversions from Pg to metric screwed glands are shown in the following table.

Pg	Drilling diameter mm	Metric thread
13.5	20.4	M20
16	22.5	M22
21	28.3	M28
29	37	M36
36	47	M46
42	54	M52
49	59.3	M58

Design

The distribution system consists of 5 enclosure sizes with a basic dimension of 307 mm.

The enclosures have removable knockouts for flange openings and cable entries. They can be used for distributed as well as for single installation.

Non-transparent or transparent covers are available (size 2.5 only transparent).

The covers are fitted with quick-release locks which require a tool for opening. They also can be equipped with locks for manual operation as well as with screwed locks.

The internal mounting depth of the enclosures is 147 mm. For enclosure size 2 additional covers are available for mounting

depth 212 mm; for enclosure size 2.5 a transparent cover is available for mounting depth 185 mm.

The mounting depth of enclosure sizes 3 and 4 can be extended by means of an intermediate frame. Several frames can be used. Each frame increases the mounting depth by 92.5 mm.

Installation conditions under various climatic conditions, "Application – Installation conditions". Appropriate measures are to be taken (e.g. ventilation, indoor heating) for installation in rooms with high air humidity and heavily varying temperatures in order to exclude generation of harmful condensation water. Breathers must be installed when temperatures vary to a great extent.

1) In the case of finely stranded and extra finely stranded conductors, the maximum cross-section must be reduced in some cases by up to two steps. If necessary the conductors must be protected with end sleeves or similar against fanning out.
When connecting Al conductors, commercially available Al-Cu adapter pieces or clamping connections must be used.

2) When using different cross-sections, the larger conductor must be laid below the other.

SENTRIC HP Molded-Plastic Distribution System

Accessories

Support rack and cable space cover

SENTRIC HP distribution board, support rack and cable space cover

Support rack

Support rack of sendzimir-galvanized shaped pressed metal for mounting SENTRIC HP distribution boards.

Punched holes at spacings of 307 mm x 307 mm enable the different distribution boards to be fixed using the supplied captive nuts.

Widths (3, 4, 5, 6) x 307 mm (= distribution board width); for greater widths, racks can be connected together.

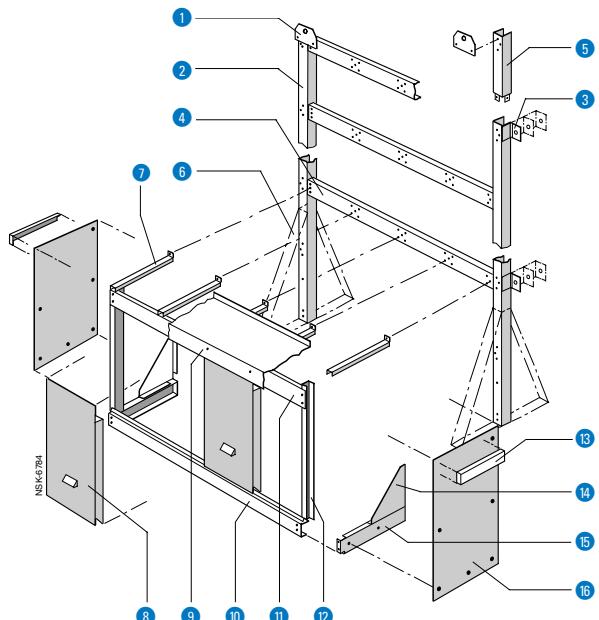

Height 6 x 307 mm; the height can be increased by 307 mm using an extension.

Cable space cover

Cable space cover for mounting on the SENTRIC HP support rack or an appropriate profiled iron frame, with plug-in molded-plastic covers (color light gray, RAL 7035).

Heights 370 and 677 mm. With the 8HP9 057 double flange, enclosures can also be fitted under the cable space cover. On the outer sides however, due to the joining sheets, only enclosures of size 1 in the case of 370 mm height and enclosures of size 2 for 677 mm height can be used.

For distribution boards > 6 widths = 1842 mm, 2 cable space covers must be ordered in accordance with the support racks. However, as in this case only 1 set of side walls ⑯ and 1 set of corner covers ⑬ are required, it is advisable to order the second cable space cover in separate parts – without the specified items.

Individual parts for support rack and cable space cover

- ① Lifting lug
- ② Support profile
- ③ Wall mounting bracket
- ④ Mounting rail
- ⑤ Support profile extension
- ⑥ Supporting foot for free-standing installation
